What's New in the Image Viewer ActiveX Component?

In this video I show you how to effectively use Instagram's API to read and write comments. I cover using Endpoints to get the comments from and posting comments asynchronously. We are currently using the public comments endpoint to get our data. The comment endpoint is a bit different from the public accounts endpoint I walked through in a previous video, which is part of what makes it so powerful. In the Instagram API you're probably going to want to use the comments endpoint so you can access all the comments posted to a commentable object, like a photo or video. To do so, you need a few things: - Your access token, which you either generated or can get from the Access Token troubleshooting step. - The commentable object, which you can fetch from a commentable object's field. The commentable object in this example is comments, which returns all the comments posted on an object, like photos. If you want to attach a comment to a commentable object, you need to use POST requests for commentables and POST requests for comments. To do so, you need a few other pieces of information: - The commentable object you want to attach the comment to. This will be the commentable_id. - The comment you want to attach to the commentable object. This will be the commentable_id and the comment_id. - The comment_body, which is a raw json string of the comment. - The text_body, which is a sanitized version of the comment. To create a comment you have three different methods to choose from: 1) POST /comments - this endpoint will post the comment body and text body to the comments endpoint in a single request. 2) POST /comments/ID - this endpoint will post the comment body and text body and attach them to the comment with the commentable_id argument. 3) POST /comments/ID/comments - this endpoint will post the comment body and text body and attach them to the comment with the commentable_id and comment_id arguments. For more information on how to get the access token, you can check out: You should store your access token in a safe place - preferably not on your website's backend or on a shared hosting plan. Instagram doesn't allow 3rd party apps to "access things they shouldn't be able to

System Requirements:

Minimum: OS: Windows XP or higher Processor: 1.0 GHz or higher Memory: 256 MB RAM Graphics: 128 MB of Video RAM DirectX: Version 9.0c Hard Drive: 600 MB of available space Additional Notes: This game is designed to work best with DX10 hardware. Minimum Recommended: OS: Windows 7 Processor: 1.7 GHz or higher Memory: 512 MB RAM Graphics: 256
